

JOINT FORMING JF-500

With Book Pressing

Introducing our advanced Book Press and Joint Forming Machine, designed to revolutionize your book binding process with precision and efficiency. Immediately after casing-in, our machine applies pressure to the books while simultaneously burning in the joint, ensuring a strong and permanent bind. With adaptable pressure and temperature settings, the joint bars mould the binding material to perfection, resulting in an exceptionally well-formed joint. Featuring a hydraulic book press with 3 tons of even pressure distribution, our machine guarantees consistent results. The adjustable depth of joint formation allows for customization according to your binding material and preferences, while heated formers ensure perfect joint formation every time. Equipped with interchangeable guides for various applications, our machine offers versatility and adaptability to meet your unique binding needs. Whether you're producing books, notebooks, or other paper-based products, our Book Press and Joint Forming Machine delivers impeccable results, ensuring a perfect and permanent shape with each use.

Technical Data

Book Thickness	mm	8-100
Book Size	mm	500 x 500
Power		3 HP, 3 Phase, 415 V
Dimensions	mm	L900 x W820 x H400
Hydraulic Pressure	Kgs	3000
Weight	Kgs	600

- The books are pressed immediately after casing-in and the joint is burnt-in at the same time. Pressure and temperature of the joint bars can be adapted to the binding material. Therefore the joint is formed extremely well and
- Receives a perfect and permanent shape.

- Hydraulic book press of 3 ton for even pressing of book
- Adjustable depth on joint formation.
- Heated formers for perfect joint formation.
- Inter changeable guides for various applications.
