

## TWIN CASE CORNER ROUNDING

Introducing the MegaBound Twin Case Corner Rounding Machine, a versatile solution for perfecting the corners of completed cases with ease and precision. After the cases are manually inserted into the corner rounding station, our machinery facilitates two passages, ensuring the flawless rounding of all four corners. Equipped with a heating system, the unit softens the glue before rounding, guaranteeing smooth and professional results.

Featuring easy operation and quick make-ready capabilities, our machine is designed for efficiency and convenience. With adjustable corner pressure time controlled via the display, operators can fine-tune settings to meet specific production requirements, ensuring consistent and optimal performance. Compact in size, our machine requires less space, making it ideal for small to medium production environments.

Experience seamless corner rounding with our MegaBound Twin Case Corner Rounding Machine, designed to streamline your production process and deliver impeccable results. Whether you're producing books, boxes, or other paper-based products, our machine offers versatility and reliability to meet your needs.

### Technical Data

Case size minimum	-	150 mm x 100 mm
Case size maximum	-	480 mm x 600 mm
Power Supply	-	1 KW (415 Volts)
Compressed Air required	-	6 bar
Dimensions	-	1,450 x 1,000 x 1,400 mm
Weight	-	250 kg

### Features

- Easy Operation
- Quick Make-ready
- Less Space
- Run Small and Medium Production
